

Enthusiasm, lasting motivation and success.
Both with and for our customers.

webDAX

WebEDI solution for all industries with a focus on retail

A SHORT-VIEW

webDAX was developed especially for companies operating in the trading sector and therefore supports the standards commonly used in this sector. The universal structure and the use of the generally valid format EDIFACT for orders, order confirmations, delivery notes and invoices and in the field of data transmission, the protocols such as AS2, X.400 and/or OFTP2 also enable the use by companies that are partly or completely active in other sectors. The solution is rounded off by industry-compliant barcode labels, which the supplier can simply download and print out.

UTILIZATION-SCENARIO – AN INSIDE VIEW

On the one hand, the webDAX can be used by suppliers with an individual access in order to meet the EDI requirements of their customers with little effort and only the use of a web browser.

On the other hand, webDAX can be used by customers as a portal solution to connect their small and medium-sized suppliers who do not invest in an EDI solution themselves. The portal solution can then also be used in the customer's own corporate identity.

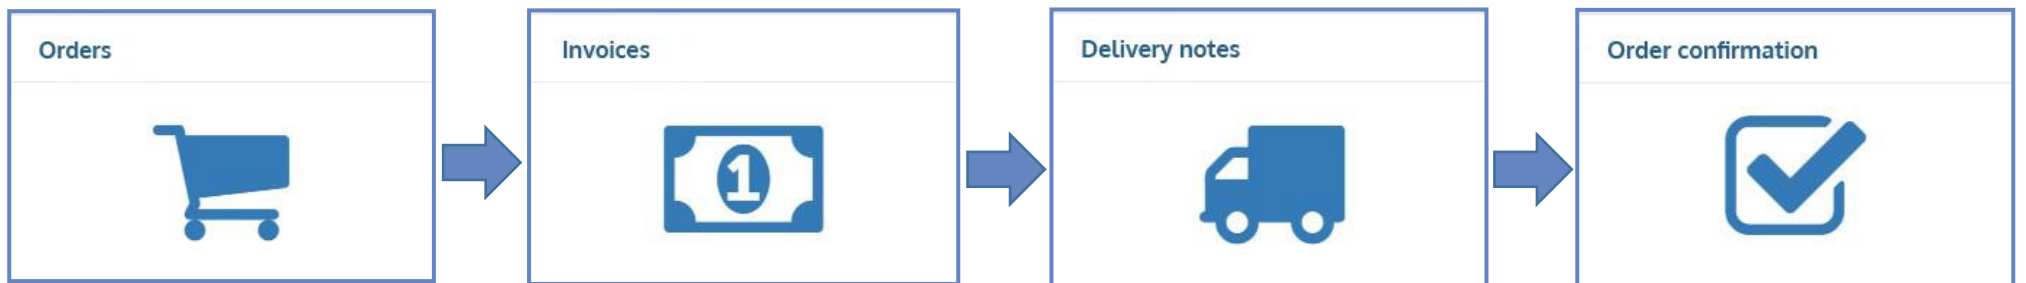

DIE BASIC BENEFITS – AT A VIEW

From the supplier's point as a user:

- Compliance with your customer's EDI specifications
- No installation required
- Fast and uncomplicated commissioning
- Low costs
- Reduction of your manual effort by data transfer along the process chain for orders, order confirmations, delivery notes and invoices

Enthusiasm, lasting motivation and success.
Both with and for our customers.

Data transfer along the process chain

From the customers point as a portal operator:

- Fast connection of your non-EDI-capable suppliers
- Reduction of your manual effort and thus of costs
- Avoid errors during data entry
- Operating the portal in your own corporate identity

THE FEATURES OF THE SOFTWARE – AN INSIDE VIEW

- **All data exchange standards are covered**
The transmission standards used in a wide various of industries, such as OFTP1/2, ENX, AS2, X.400, (S)FTP, HTTPS, etc. are fully met.
- **No matter which format you need, we can implement it**
All industrial, structured data formats such as VDA, EDIFACT, ANSI X12., ODETTE, etc. can be implemented.
- **Which good tags do you need?**
We have implemented the standard goods tags, should you need another format, we can provide this.

Maximum flexibility
