SECURE YOUR

DATA

Engineering data exchange via

Internet portal

CAD **teamDAX**

- You send and receive, and we do the rest -

AN INSIGHT

The automotive industry has always outsourced the development of automobiles to engineering service providers. The processes between the partners are characterised by ever shorter development cycles, increasing data volumes and cross-location cooperation. Therefore, the protection of "intellectual property" is becoming more and more important, and so is the secure and fast exchange of data between the engineering service provider and the manufacturer.

AT A GLANCE

team**DAX** is the ideal tool for cross-company collaboration and data exchange in the automotive industry. The support of OFTP 1.4 and OFTP2, as well as the VDA recommendation 4951 ENGDAT offers you the possibility to exchange CAD data via a network node of HÜNGSBERG GmbH which can be reached from the internet. This gives you access to the data exchange network of the German and European automotive supplier industry without having to invest in your own software solution. All you need to use the access is an Internet connection and a browser. team**DAX** is thus the simple and fast way to ODETTE data exchange.

PERFORMANCE FEATURES
- A FAR-SIGHTED VIEW -

Inexpensive entry into data exchange

You don't know how long you will need the data exchange solution, you only have a few transfers or you simply don't want to have anything to do with the administration of the infrastructure, because all this causes high initial costs when you buy it? Then you can avoid all this with our web service: you become OFTP-capable at a reasonable price.

Service included

We monitor your data exchange and ensure that your data reaches its destination. You only send and receive, we take care of the rest.

All "automotive" standards are covered

The standards required by the automotive industry for transmission via OFTP1/2 and ENX,
as well as ENGDAT and ENGPART functionality are comprehensively fulfilled.

Fastest availability and connection

With just a few pieces of information from you
and the set-up by us on the web server, you are
already OFTP-enabled. You can operate this
from anywhere in the world via the Internet.
OFTP connections already exist to most OEMs,
TIERS and a large number of suppliers.

Simply secure

SSL encryption between the guest computer
and the team**DAX** gateway ensures secure data
traffic over the Internet.

Notification of successful file exchange

You will be informed by e-mail about successful transmission or when a file has been received for you.

Compression and decompression possible

At the request of your communication partners, files can be exchanged in archive formats, which can
optionally also be compressed. The processes are automated during sending and receiving.

Connecting small partners without a data exchange system

If you want to have all data exchange processes at a glance, you can connect business partners wi-
thout an OFTP1/2 data exchange system. Data can be exchanged with these partners via a secure
HTTPS connection and is then available for further processing.

Product scenario

Our SaaS CAD solution for you

Your Company

Receive and send design data via browser.

Your internet access

teamDAX CAD web solution

Data exchange module

OFTP(2), ENX
